GOOD PRACTICE SUMMARY

Good Practice

Migration Information and Data Analysis System (MIDAS)

Description

To enhance border management in Haiti, IOM, in collaboration with the Directorate of Immigration and Emigration (DIE), installed MIDAS, a Border Management Information System (BMIS), to effectively monitor the border crossing points. MIDAS was progressively installed from 2019 to 2022 at three land border points and the Cap Haitien International Airport. The system replaced a handwritten registration process, improving the country's migration management and border security in accordance with international standards.

Location

Authorized land crossing points: Malpasse (2019), Ouanaminthe (2020), Belladère (2021). MIDAS installation at the authorized border crossing point of Anse-à-Pitre is planned for the end of 2022. Cap Haitien International Airport.

Beneficiaries

Directorate of Immigration and Emigration (DIE)

MAIN ACTIONS

INTRODUCTION

The following good practice (GP) was developed by the IOM office in Haiti and the DIE. The GP consisted of installing the MIDAS system at three land border points between the Dominican Republic and Haiti and at Cap Haïtien International Airport. This initiative was implemented under the IOM Western Hemisphere Program supported by the U.S. Bureau of Population, Refugees, and Migration (PRM)¹.

The GP contributes to the achievement of the Sustainable Development Goals of the 2030 Agenda, focused on goal 10: “Reduce inequality within and among the countries,” that its target 10.7 highlights: “Facilitate orderly, safe, and responsible migration and mobility of people, including through implementation of planned and well-managed migration policies.” Furthermore, regarding the Global

Compact for Safe, Orderly and Regular Migration, the initiative is aligned with the following objectives: objective 5 – Increase the availability and flexibility of regular migration pathways (actions B, C, and D) and objective 7 – Address and reduce migration vulnerabilities (action H) and objective 1 – Collect and utilize accurate and disaggregated data as a basis for evidence-based policies.

The documentation of this experience was made possible thanks to the support of Idelki Familia, Serge Guillet, and Olivier Tenes.

CONTEXT

Due to its geographical location, the Haitian population is particularly exposed to natural events such as earthquakes, tropical storms, and hurricanes. The most recent earthquake in August 2021 claimed more than 15,000 lives, including 2,248 deaths, and affected the southwestern part of the country, including infrastructure and access roads, forcing nearly 39,000 people to flee their homes, exacerbating the population’s pre-existing vulnerabilities². In addition, poverty has intensified due to the deep political crisis accentuated by the murder of President Jovenel Moïse in July 2021, and the insecurity caused by gang-related violence in Port-au-Prince Metropolitan Area, which has resulted in 96,000 Internally displaced persons³. These events have led to a significant increase in Haitian migration in the region; the main host countries are the United States, the Dominican Republic, Chile, and Brazil⁴.

Haiti shares the island of Hispaniola with the Dominican Republic, with a border of 388 km. This area is marked by an active cross-border commercial exchange, driving a continuous migratory flow⁵. This zone has four authorized land border crossing points: Ouanaminthe, Belladère, Malpasse, and Anse-à-Pitre; additionally, it is estimated that there are around ninety-six unofficial border crossings.

In this highly porous border, there is a proliferation of illegal activities, such as human trafficking, migrant smuggling, organ trafficking, arms trafficking, and other forms of crime. Therefore, IOM has jointly worked with the government since 2016 to strengthen border management. As a result, IOM and the DIE identified the need to improve the monitoring of those entering and exiting the territory since it was carried out by a written record. Consequently, to promote effective border monitoring in compliance with international standards, IOM Haiti, starting in 2019, gradually implemented the MIDAS system at the country’s three land crossing points and at the international airport. MIDAS installation at the last official land border crossing point is planned by the end of 2022.
